

Responses to Wek'èezhii Renewable Resources Board letter to Tłıchǫ Government and GNWT Environment & Natural Resources on Bluenose-East/Sahtı caribou management proposal

1. *Please clarify in Table 1 (p.8) whether the harvest information provided is for a region or a specific community.*

The Bluenose-East caribou harvest information in Table 1 of the proposal is specific to Déljne and Kugluktuk as the only harvesters of Bluenose-East caribou are from those communities in the Sahtu (Northwest Territories) and Kitikmeot (Nunavut) regions respectively. The information for Wek'èezhii is for all the Tłıchǫ communities, as reported by the Tłıchǫ Government. No harvest of Bluenose-East caribou was reported to the GNWT Department of Environment & Natural Resources by other NWT Indigenous governments or Indigenous organizations.

2. *To assist with communications and understanding, please develop and share in each Tłıchǫ community a plain-language summary and/or poster of the joint management proposal.*

The Tłıchǫ Government and GNWT Department of Environment & Natural Resources will develop a plain-language summary and a poster as requested.
